Hanyu Fangyan 汉语方言 'Chinese dialects'

- *Hanyu* 汉语 'Han speech'
  - the Chinese language spoken by the Han people, a native ethnic group (approximately 90% of China's population)
  - *Han* comes from the Han Dynasty, which succeeded the short-lived Qin Dynasty that united China
  - *Hanyu* (lit., "Han language") is descended from an ancient common Han language
- *Fangyan* 方言 'regional speech'
  - all of the sub-varieties of Han speech in China
  - in contrast to ***Putonghua*** 普通话 'standard speech'
    - based on the Mandarin dialect of China's capital city, Beijing
  - ***fangyan*** is a compound of
    - *fang* ("direction, locality, side, place, region, area")
    - *yan* ("speech, talk, language, word, saying")

Chinese dialects

- All of the groups of dialects evolved from Han Chinese, their common ancestral "parent", with Northern Mandarin as a backbone.
- Chinese dialects show a primary split into Mandarin and non-Mandarin groups, both of which, along with their sub-branches, are in flux. The number and names of the divisions vary in different accounts.
- The Min dialect
- The Xiang dialect
- Kejia (Hakka) dialect and Gan dialect
- Jin dialect

ANYUAN HAKKA

An understudied variety of Hakka Chinese

How does it sound like?

How does it sound like?

The North Wind and the Sun: Anyuan Hakka (Consultant: ST, 10/26/2022)

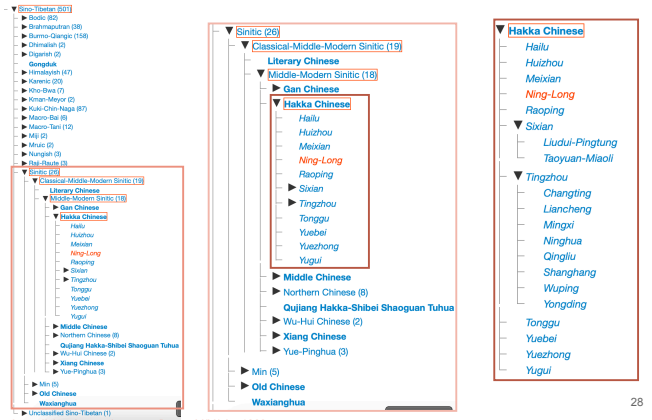

The North Wind and the Sun were disputing which was the stronger, when a traveler came along wrapped in a warm cloak.

They agreed that the one who first succeeded in making the traveler take his cloak off should be considered stronger than the other

Then the North Wind blew as hard as he could, but the more he blew the more closely did the traveler fold his cloak around him; and at last the North Wind gave up the attempt.

Then the Sun shined out warmly, and immediately the traveler took off his cloak.

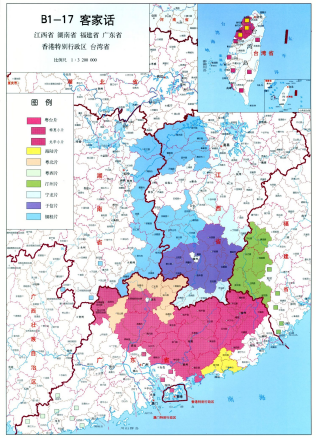

And so the North Wind was obliged to confess that the Sun was the stronger of the two.

Reduplication of adjectives

- **strict AAB shape**
- a fixed tonal pattern of mid level + mid level for the reduplicated syllables
- an expressive, affectionate, lifelike meaning/function.
- can be used predicatively and attributively
- **restrictive productivity in various kinds of adjectives**

Main Takeaways

- Languages in China ≠ Chinese languages
- Chinese languages ≈ Chinese dialects
- Main dialects groups: Min, Wu, Hui, Ping, Xiang, Gan, Hakka, Jin, Mandarin, Yue (Cantonese)
  - All of the groups of Chinese dialects evolved from Han Chinese, their common ancestral “parent”, with Northern Mandarin as a backbone.
- Anyuan Hakka is an understudied variety of the Hakka group
  - Five tones
  - Contrastive syllabic nasals in highly frequent lexicon
  - Reduplication of adjectives takes strictly AAB form
  - Nasal and tonal marking for yes/no questions
